What if your iPad didn't need wires?

LaunchPort has come up with a great solution for docking and charging of iPads. No longer will you guess where the families iPad has wandered off too or where that charging cable is hiding.

The LaunchPort is a two part system. A thin case called the PowerShuttle is snapped on to the outside of your iPad, similar to a protective case. On a wall, the mating WallPort docking station is installed. Once the iPad is placed on the WallPort, the inductive charger provides wireless power to the battery.

After seeing the LaunchPort system first hand, we were impressed with the functionality and simple design. A great feature is the iPad can be used either horizontal or vertical when docked. LaunchPort does not require a large amount of drywall work as other wall docks do for installation.

Don't need a wall mount? LaunchPort also has a desktop version available.

Recently Completed Project

This Wine Country Estate set in the foothills of Sonoma County features a complete Lutron Lighting Control system which operates lighting, motorized shades, motorized doors, fountains, fireplaces, and patio heaters spread over the entire property. Working with the electrical contractor, electrical engineer, and general contractor, LAViD Designs completed the design and system programming. From any of the lighting control keypads, the homeowner can easily operate lighting, motorized shades or the other features. Dimming control and automatic time clock functions contribute to energy savings.

About LAViD Designs

LAViD Designs specializes in Lighting Design, Lighting Control Systems Design, and Audio/Video Systems Design in Commercial and Residential projects. Our goal is to find the best possible solution while keeping in mind important factors such as esthetics, ease of use, and energy savings. We are able to design systems that best fits the clients needs and budget.
